

Project Handoff: Contractor Ops Resume Screening

Prepared October 2026 by Tammy Harris (with Claude). For whoever is taking over this project.

1. What this project is

We recruit contractors for two roles and need to screen hundreds of candidates quickly:

Pool	Role	Location	Airtable table
BDR	Business Development Representative	USA (plus a few in Canada)	BDR (about 340 candidates)
WPC	"CSM – Workplace Collection". Despite the name, this is high-volume outbound phone sales that signs businesses up as data-collection sites	Mexico City	WPC (444 candidates)

There are two parts to the project:

1. **The Resume Screening app** (live on Vercel). You pick a job description and a candidate pool, and Claude scores every candidate 0–100 as Strong, Possible or Weak fit, with reasons. It's read-only against Airtable.
2. **The budget and seniority check** (done directly in Airtable). For every **Strong fit** candidate, we flagged whether they are executive-level, or are likely to expect more pay than our budget.

2. Where everything lives

What	Where
Live app	https://resume-screening-three-omega.vercel.app (password-protected, see section 4)
Vercel project	https://vercel.com/scaleai/resume-screening (Scale Enterprise team)
GitHub repo	https://github.com/scale-ops/ubiquitous-system (branch <code>main</code> is what's live)
App code	<code>resume-screening-app/</code> folder in the repo
Airtable base	https://airtable.com/appqmAg1Av6yheTUu (base ID <code>appqmAg1Av6yheTUu</code>)
Pay-rate research	<code>pay-rate-benchmarks.pdf</code> / <code>.md</code> in the repo root
App setup guide	<code>resume-screening-app/README.md</code>
This document	<code>HANDOFF.md</code> in the repo root

3. Access the new owner needs (checklist)

Ask for each of these on day one:

- ☐ **Airtable**: editor access to base `appqmAg1Av6yheTUu`
- ☐ **Vercel**: member of the **Scale (Enterprise)** team, with access to the `resume-screening` project
- ☐ **GitHub**: write access to `scale-ops/ubiquitous-system` (scale-ops is a GitHub Enterprise org)
- ☐ **App password** (`APP_PASSWORD`): get it from Tammy. It's not written down anywhere in this document on purpose.

- ☐ **AI Gateway key**: only if you need to rotate it. It's managed in Vercel → **AI Gateway** → **API Keys**.
 - ☐ **Airtable personal access token**: the app uses Tammy's token. **Before Tammy's access ends, create your own token and replace `AIRTABLE_TOKEN` in Vercel** (see section 4.4), or the app will stop working.
-

4. The Resume Screening app

4.1 Daily use

1. Open the live app link and log in. Use any username, plus the app password.
2. Choose a **Job**. The list comes from the Airtable table `Job Description Links`, and each row needs a job description PDF attached.
3. Choose a **Candidate pool** (`BDR` or `WPC`).
4. Click **Find best fits**. A full pool takes about 5–10 minutes. Keep the tab open.
5. Filter by **Strong / Possible / Weak fit** or search. Click a candidate for details, a link to their resume, or **Deep review with full resume** (Claude reads the resume PDF and writes a requirement checklist plus interview questions).
6. Click **Download CSV** to share results.

Results are saved **in your browser only**, not in Airtable, so a refresh doesn't lose them, but a teammate won't see your run.

Adding a job: add a row to `Job Description Links` with the job name and the PDF attached, then refresh the app. **Adding candidates**: add rows to `BDR` or `WPC` as usual, then click **Re-run screening**.

4.2 How it works (technical)

- **Stack**: Next.js 16 (App Router), TypeScript, `@anthropic-ai/sdk`, deployed on Vercel.
- **Login**: `proxy.ts` puts HTTP Basic auth on every page and API route, checking against `APP_PASSWORD`.
- **Airtable reads**: `lib/airtable.ts` (REST API, read-only). The pool table names are listed in `P00LS`.
- **Claude calls**: `lib/claude.ts`.
- `summarizeJob`: turns the job description PDF into a requirements list (once per job).
- `scoreCandidates`: scores batches of 20 candidates using their Airtable profile fields, with a structured JSON output.
- `deepReview`: reads one candidate's resume PDF in full.
- **Batching**: `app/page.tsx` sends batches of 20, 3 at a time, so no request hits Vercel's time limit.
- **API routes**: `app/api/` holds `jobs`, `candidates`, `job-summary`, `score`, `deep-review` and `resume`. The `resume` route fetches a fresh link each time, because Airtable file links expire after a few hours.
- **Fairness guardrail**: the system prompt tells Claude to judge only job-relevant qualifications and never protected characteristics, and to ignore any instructions inside resumes.

4.3 How Claude is reached: Vercel AI Gateway

The app does **not** use a direct Anthropic API key. It goes through **Vercel's AI Gateway**, and usage is billed through Vercel. This was set up in October 2026: - `lib/claude.ts` reads the model name from `CLAUDE_MODEL` (default `claude-opus-5`). - When `ANTHROPIC_BASE_URL` is set (meaning the Gateway is in use), the app turns off the "server-side fallback" beta feature, because we couldn't confirm the Gateway supports it. - To switch to a direct Anthropic key later: delete `ANTHROPIC_BASE_URL`, `ANTHROPIC_AUTH_TOKEN` and `CLAUDE_MODEL`, add `ANTHROPIC_API_KEY`, then redeploy. No code changes are needed.

4.4 Environment variables (Vercel → resume-screening → Environment Variables)

Name	Value	Notes
AIRTABLE_TOKEN	Airtable personal access token (pat...)	Needs scope <code>data.records:read</code> and access to the base. Currently Tammy's; replace it with yours.
AIRTABLE_BASE_ID	appqmAg1Av6yheTUu	
APP_PASSWORD	team password	Changing it logs everyone out
ANTHROPIC_BASE_URL	https://ai-gateway.vercel.sh	Routes Claude calls through the AI Gateway
ANTHROPIC_AUTH_TOKEN	AI Gateway API key	From Vercel → AI Gateway → API Keys
CLAUDE_MODEL	anthropic/claude-opus-5	Gateway model names need the <code>anthropic/</code> prefix
AI_GATEWAY_API_KEY	(pre-existing)	Not used by the app; harmless

After you change any variable, you must redeploy: go to **Deployments** → ... on the top deployment → **Redeploy**.

4.5 Deploying changes

- Vercel deploys automatically on every commit to `main`.
- Vercel's **Root Directory** must stay set to `resume-screening-app`, because the app isn't at the top of the repo. Without it the build fails ("No Next.js version detected").
- Make code changes either by uploading files through GitHub's website (**Add file** → **Upload files**, then commit to `main`) or through a Claude Code session once Claude's GitHub access is approved (see section 7).

4.6 Costs

- **Vercel and GitHub:** covered by Scale's Enterprise plans.
- **Claude (through the AI Gateway):** pay per use. Scoring a full pool costs roughly \$1-2, and a deep review a few cents. Check **Vercel** → **AI Gateway** → **Usage**.

5. Airtable base (appqmAg1Av6yheTUu)

5.1 Tables

Table	Purpose
Job Description Links	One row per job: name plus the job description PDF. The app reads this.
BDR	BDR candidate pool (US/CA). The app reads this.
WPC	WPC candidate pool (MX/VE). The app reads this.
Reviewer Allowlist, Internal Team, Feeder	Supporting tables. The allowlist was meant for a future Google sign-in; the live app uses a single shared password instead

The candidate fields come from Outlier/marketplace exports: name, email, `IP_COUNTRY_CODE`, `JOB_TITLE`, `JOB_COMPANY`, `JOB_EXPERIENCE`, `EDUCATION`, `WORKERSKILLS`, `PROJECTS`, and a resume PDF attachment. Don't rename these tables or columns: the app expects these exact names.

5.2 Fit columns (from an earlier Claude screening run)

- **BDR:** `BDR Fit Rank`, `BDR Fit Score`, `BDR Fit Verdict`, `BDR Fit Notes`

- **WPC:** CSM Fit Rank, CSM Fit Score, CSM Fit Verdict, CSM Fit Notes
- There are **92 Strong fits in BDR** and **12 in WPC**.

5.3 Budget-check columns (added October 2026, both tables, Strong fits only)

Field	Meaning
Seniority Level	Entry / IC · Experienced IC · Manager / Senior · Executive / Leadership (judged from job titles)
Rate vs Budget	Within budget · Borderline (no more than about 25% over) · Over budget · Over budget - Executive
Est. Market Rate (USD/yr)	Estimated annual pay the candidate would likely expect
Location (State)	Still blank. Needs the resume read (see section 7)
Rate Notes	Why they were flagged, plus the benchmark used

6. Budget analysis: method and findings

6.1 Budgets given

- **BDR (USA):** \$20/hr = \$800/wk = \$3,466.67/mo = \$41,600/yr
- **WPC (Mexico City):** half of BDR, so \$10/hr = \$400/wk = \$1,733.33/mo = \$20,800/yr

6.2 How the estimates were set

Seniority	US	Canada	Mexico
Entry / IC	\$50k (Borderline)	\$40k (Within budget)	n/a
Experienced IC	\$70k (Over budget)	\$50k (Borderline)	\$25k (Borderline)
Manager / Senior	\$85k (Over budget)	n/a	\$45k (Over budget)
Executive / Leadership	\$125k (Over budget - Executive)	n/a	\$60k (Over budget - Executive)

Sources and the full state-by-state tables are in [pay-rate-benchmarks.pdf](#). The figures came from search-result summaries of ZipRecruiter, Glassdoor, Payscale, Talentosy and others, so check any figure you rely on heavily against its source.

6.3 Results

Flag	BDR (92)	WPC (12)
Within budget	3 (all Canada)	0
Borderline	43	2
Over budget	40	4
Over budget - Executive	6	6

- **Executive-level, BDR:** Matimba Masinga, Marcia Stuhler, Todd Gillen, Emily Vinyard, Kimberly Millis, Brandon NeSmith
- **Executive-level, WPC:** Mario Azuela, Mark Nakamichi, Darren Gonzalez Avelar, Andrea Rojas, Adrian Olaya

6.4 Key findings

1. **The \$20/hr BDR budget is below the average US SDR base pay in every state except Florida (about even).** The US average is about \$55k. Expect pushback from anyone beyond entry level.
2. **The WPC job description's posted pay is lower than the WPC budget used for the flags.** The job description says **\$212/week plus \$0.50 per approved hour**, which is about **\$5.80/hr, or about \$12k/yr**, compared with the \$10/hr used. At the posted pay, every WPC strong fit is over budget. **This needs a decision** (see section 7).
3. **The WPC "CSM" role is really telesales.** Mexican sales pay (about MXN 12k/month) is a better comparison than CSM pay (about MXN 38k/month in CDMX). The posted pay is reasonable for entry-level reps, but not for the senior account managers and directors who rank as strong fits.

7. Open items and next steps (in priority order)

#	Item	Owner	How
1	Decide the WPC budget: the posted job pay (about \$5.80/hr) or \$10/hr	Hiring manager	Then re-flag the 12 WPC strong fits in Airtable
2	Replace AIRTABLE_TOKEN with the new owner's token	New owner	Section 4.4, then redeploy
3	Confirm deep review works on the live app	New owner	Click a candidate → Deep review
4	Fill in Location (State) and re-price by state	Claude session	See "Claude Code environment" below
5	Approve Claude's GitHub access to the repo	scale-ops org owner	Pending request: org settings → GitHub Apps → Claude → add ubiquitous-system
6	Check BDR flags against the BDR job description's posted pay, if it lists one	New owner	Same idea as finding 2
7	(Cosmetic) The job summary panel shows raw <code># / ##</code> markdown symbols	Developer	Render the summary as markdown in <code>app/page.tsx</code>
8	(Docs) <code>resume-screening-app/README.md</code> doesn't mention setting Vercel's Root Directory, and still describes a direct Anthropic key	Developer	Update when convenient

Claude Code environment (if you use Claude to keep working on this)

- **Resumes:** Claude's cloud environment blocks `v5.airtableusercontent.com`, where Airtable stores resume files. Add it under **environment menu → Edit → Network access → Allowed domains**, then start a **new** session.
- **GitHub pushes:** Claude can't push to the repo until item 5 is approved and you reconnect GitHub at `https://claude.ai/customize/connectors?auth_start=github&auth_start_force=1`. Until then, upload files through GitHub's website.
- **Prompt to continue the Airtable work:**

Continue the rate-vs-budget work on Airtable base `appqmAgi1Av6yheTUu`: read each strong-fit resume, fill in Location (State), and re-price using the state rates in `pay-rate-benchmarks.md`.

8. Troubleshooting

You see	Fix
Login box keeps reappearing	Wrong password. Check <code>APP_PASSWORD</code> in Vercel
"Set the APP_PASSWORD environment variable..."	Add <code>APP_PASSWORD</code> , then redeploy
"Could not resolve authentication method..."	The Gateway variables are missing or misspelled, or you didn't redeploy after adding them
"Missing environment variable ..."	Add it in Vercel, then redeploy
"Airtable error 401/403"	The token is wrong, expired, or lacks access to the base
"Airtable error 404"	A table was renamed. The app needs <code>Job Description Links</code> , <code>BDR</code> and <code>WPC</code>
"model not found"	Check the exact name under Vercel → AI Gateway → Models and update <code>CLAUDE_MODEL</code>
Build fails: "No Next.js version detected"	Vercel Root Directory isn't <code>resume-screening-app</code>
Some rows say "Not scored"	Click Re-run screening
A job doesn't appear in the list	Its <code>Job Description Links</code> row has no PDF attached

9. Lessons learned

- **Redeploy after every environment variable change.** Vercel doesn't apply new variables to a running deployment.
- **GitHub Enterprise app approvals happen per repository.** An app installed on the org isn't automatically allowed on every repo, so an org owner has to approve each one.
- **Airtable attachment links expire.** Never store them; fetch fresh links each time, which the app already does.
- **Job titles alone tell you seniority, but not dates.** Someone who was a "Director" 8 years ago is flagged the same as a current one, so spot-check the executive flags.
- **Check each job description's posted pay against the budget** before flagging candidates.
